Architecture for a Sustainable Future

All about the Holistic Approach in Japan

Towards Architecture for a Sustainable Future (SENDA Mitsuru) 3

Foreword:

Architecture's contribution to solving global environmental problems
(MURAKAMI Shuzo) 4

Chapter 1: The Background and Principles of Architecture for a Sustainable Future

1-1 Architecture, the environment and prevailing worldviews 14

- 1.1.1 Changing environmental problems 14
- 1.1.2 The idea of a sustainable society 16
- 1.1.3 Sustainability in architecture 18
- 1.1.4 The major themes of Architecture for a Sustainable
Future and the structure of this book 20
- Rio Declaration on Environment and Development
(June 1992) 22
- Kyoto Protocol (December 1997) 24

1-2 Basic concepts of Architecture for a Sustainable Future 27

- 1.2.1 The global paradigm 27
- 1.2.2 A new paradigm for architectural design 32
- 1.2.3 The circulation of matter and energy 35
- The environmental loads and costs of a building
during its life cycle 39
- Life Cycle Assessment (LCA) 41
- 1.2.4 Integration and collaboration 44
- Baubiologie (Building Biology) 48
- Declaration of Interdependence for a Sustainable Future
(June 1993 by UIA/AIA) 50
- Declaration for Environmentally Symbiotic Housing
(November 1997) 51
- Architectural Charter for a Global Environment
(June 2000 by AIJ) 53

References in Chapter 1

Chapter 2: The Vision and How to Make and Use

2-1 How to integrate buildings into their natural and urban environments 62

- 2.1.1 Integrating buildings into nature 62
- 2.1.2 Multilayered natural, rural and environments 68
- 2.1.3 The nested structure of local environment 70
- 2.1.4 Designing to restore and create nature in cities 72
- 2.1.5 The Compact City 78
- 2.1.6 Designing communal housing that links residents with the
surrounding community 84

2-2 How to conserve energy 88

- 2.2.1 Energy conservation in tune with local climates 88
- Climate division of Japan 91
- 2.2.2 The urban environment from a thermal viewpoint 94
- 2.2.3 Energy conservation in housing 106
- 2.2.4 Japanese Energy Conservation Standards of Next
Generation for Housing 112
- 2.2.5 Energy conservation of (non-residential) building 116
- 2.2.6 Life cycle energy consumption 122
- 2.2.7 Passive design 124
- PLEA 131
- 2.2.8 Active design 133

2-3 How to economize the resources 137

- 2.3.1 How to prolong the lifespan of buildings and
use them longer 137
- 2.3.2 "SI Building" and "Open Building" 144
- 2.3.3 Using resource effectively 146
- 2.3.4 Refurbishment technology 153
- 2.3.5 Employing environmentally friendly and people-
oriented building materials 157
- Basic Law for Establishing a Recycling-
Based Society 169

2-4 How to provide safety and health 171

- 2.4.1 Safe buildings 171
- 2.4.2 Universal design 174
- 2.4.3 How to make and use buildings considering Indoor Air Quality 179
- 2.4.4 Ensuring the health and safety of a building's users . . . 189

2-5 How to link generations and cultures 190

- 2.5.1 Creating a supportive environment for children 190
 - 2.5.2 Passing on a heritage of excellent architecture 197
- References in Chapter 2 199

Chapter 3: Design Process and Assessment**3-1 The design process and assessment of Architecture for a Sustainable Future 202**

- 3.1.1 The design process 202
- 3.1.2 Framework for a comprehensive assessment system of building environmental performances 205

3-2 Evaluating the Site Environment (as Pre-design) . . . 209

- 3.2.1 Reading nature, geography, landscape and culture 209
- 3.2.2 Mapping 212
- 3.2.3 Diagnosing the site environment 215

3-3 Assessing the plan by yourself (as Design) 218

- 3.3.1 Assessment of building environmental performances . . . 218
- 3.3.2 Environmental performance assessment methods for designers 220
- 3.3.3 Life Cycle Assessment Method 226
- 3.3.4 Life Cycle Costing Method 229
- Green Building Challenge (GBC) 230

3-4 Post-occupancy evaluation of buildings (as Post-design) 233

- 3.4.1 Monitoring 233
 - 3.4.2 Post-occupancy investigation and evaluation 236
- References in Chapter 3 238

Chapter 4: Social Systems and the Roles of Architectural Specialists**4-1 Social systems and mechanisms 240**

- 4.1.1 Life Cycle of buildings and Environmental Management . . . 240
- 4.1.2 Environmental policies related to sustainable buildings . . . 243

4-2 Social roles of architectural specialists 246

- 4.2.1 Integration of the related fields 246
- 4.2.2 Coordination of people's participation 250

4-3 Global trends and the current situation in Japan . . . 254

- 4.3.1 Current situation in OECD member countries and others . . . 254
- 4.3.2 Current situation in Japan 259
- Environmentally Symbiotic Housing-Theory, Movement and Practices in Japan 264
- The Housing Quality Assurance Act 269

4-4 IT revolution, architecture, cities and life style 275

- 4.4.1 Population explosion, technological innovation and increase of energy consumption 275
- 4.4.2 Emergence of IT (Information Technology) and its contribution to solving environmental problems . . . 277
- 4.4.3 IT and the reform of urban structure 279
- 4.4.4 IT reforming the production and consumption structures and decreasing the environmental loadings 282

4-5 Barriers to disseminating Architecture for a Sustainable Future and the solutions 285

- 4.5.1 Need for holistic approach 285
- 4.5.2 Systematic obstructive factors related to architecture and their reforms 287
